- LRN(Local Response Normalization)

$$b_{x,y}^i = a_{x,y}^i / \left(k + \alpha \sum_{j=\max(0, i-n/2)}^{\min(N-1, i+n/2)} (a_{x,y}^j)^2 \right)^\beta$$

后期争议

在2015年 Very Deep Convolutional Networks for Large-Scale Image Recognition. 提到LRN基本没什么用。

All hidden layers are equipped with the rectification (ReLU (Krizhevsky et al., 2012)) non-linearity. We note that none of our networks (except for one) contain Local Response Normalisation (LRN) normalisation (Krizhevsky et al., 2012): as will be shown in Sect. 4, such normalisation does not improve the performance on the ILSVRC dataset, but leads to increased memory consumption and computation time. Where applicable, the parameters for the LRN layer are those of (Krizhevsky et al., 2012).

采用连续的几个3x3的卷积核代替AlexNet中的较大卷积核 (11x11, 7x7, 5x5)

3*3的非线性大于5*5的

在VGG中，使用了3个3x3卷积核来代替7x7卷积核，使用了2个3x3卷积核来代替5*5卷积核，这样做的目的是什么？
